**Narratology beyond the Human** David Herman, 2018-03-01 To what extent and in what manner do storytelling practices accommodate nonhuman subjects and their modalities of experience and how can contemporary narrative study shed light on interspecies interactions and entanglements In Narratology beyond the Human David Herman addresses these questions through a cross disciplinary approach to post Darwinian narratives concerned with animals and human animal relationships Herman considers the enabling and constraining effects of different narrative media examining a range of fictional and nonfictional

texts disseminated in print comics and graphic novels and film In focusing on techniques such as the use of animal narrators alternation between human and nonhuman perspectives the embedding of stories within stories and others the book explores how specific strategies for portraying nonhuman agents both emerge from and contribute to broader attitudes toward animal life Herman argues that existing frameworks for narrative inquiry must be modified to take into account how stories are interwoven with cultural ontologies or understandings of what sorts of beings populate the world and how they relate to humans Showing how questions of narrative bear on ideas of species difference and assumptions about animal minds Narratology beyond the Human underscores our inextricable interconnectedness with other forms of creatural life and suggests that stories can be used to resituate imaginaries of human action in a more than human world **Weird**

**Abominable Science!** Daniel Loxton, Donald R. Prothero, 2013-08-06 A sharp analysis of the quest for unreal critters cryptids as they are called and the people who pursue them entertaining and thoroughly documented The Wall Street Journal Throughout our history humans have been captivated by mythic beasts and legendary creatures Tales of Bigfoot the Yeti and the Loch Ness monster are part of our collective experience Now comes a book from two dedicated investigators that explores and elucidates the fascinating world of cryptozoology Daniel Loxton and Donald R Prothero have written an entertaining educational and definitive text on cryptids presenting the arguments both for and against their existence and systematically challenging the pseudoscience that perpetuates their myths After examining the nature of science and pseudoscience and their relation to cryptozoology Loxton and Prothero take on Bigfoot the Yeti or Abominable Snowman and its cross cultural incarnations the Loch Ness monster and its highly publicized sightings the evolution of the Great Sea Serpent and Mokele Mbembe or the Congo dinosaur They conclude with an analysis of the psychology behind the persistent belief in paranormal phenomena identifying the major players in cryptozoology discussing the character of its subculture and considering the challenge it poses to clear and critical thinking in our increasingly

complex world As valuable for its analysis of the hunted as it is for the light it shines on the still hopeful hunters Publishers Weekly Highly recommended for readers looking for scientific but accessible evaluations of the existence of five notable cryptids that have captured our imaginations Library Journal starred review      **Improbable Destinies** Jonathan B. Losos, 2018-08-07 A major new book overturning our assumptions about how evolution works Earth's natural history is full of fascinating instances of convergence phenomena like eyes and wings and tree climbing lizards that have evolved independently multiple times But evolutionary biologists also point out many examples of contingency cases where the tiniest change a random mutation or an ancient butterfly sneeze caused evolution to take a completely different course What role does each force really play in the constantly changing natural world Are the plants and animals that exist today and we humans ourselves inevitabilities or evolutionary flukes And what does that say about life on other planets Jonathan Losos reveals what the latest breakthroughs in evolutionary biology can tell us about one of the greatest ongoing debates in science He takes us around the globe to meet the researchers who are solving the deepest mysteries of life on Earth through their work in experimental evolutionary science Losos himself is one of the leaders in this exciting new field and he illustrates how experiments with guppies fruit flies bacteria foxes and field mice along with his own work with anole lizards on Caribbean islands are rewinding the tape of life to reveal just how rapid and predictable evolution can be *Improbable Destinies* will change the way we think and talk about evolution Losos's insights into natural selection and evolutionary change have far reaching applications for protecting ecosystems securing our food supply and fighting off harmful viruses and bacteria This compelling narrative offers a new understanding of ourselves and our role in the natural world and the cosmos      *From Extraterrestrials to Animal Minds* Simon Conway Morris, 2022-03-28 In this learned romp of science writing Cambridge professor Simon Conway Morris cheerfully challenges six assumptions what he calls myths that too often pass as unquestioned truths amongst the evolutionary orthodox His convivial tour begins with the idea that evolution is boundless in the kinds of biological systems it can produce Not true he says The process is highly circumscribed and delimited Nor is it random This popular notion holds that evolution proceeds blindly with no endgame But Conway Morris suggests otherwise pointing to evidence that the processes of evolution are seeded with inevitabilities If that is so then what about mass extinctions Don't they steer the development of life in radically new directions Rather the reverse claims Conway Morris Such cataclysms accelerate evolutionary developments that were going to happen anyway And what about that other evolutionary canard the missing link There is plenty to choose from in the fossil record but persistently overlooked is that in any group there is not one but a phalanx of missing links Once again we under score the near inevitability of evolutionary outcomes Turning from fossils to minds Conway Morris critically examines the popular tenet that the intelligence of humans and animals are the same thing a difference of degree not kind A closer scrutiny of our minds shows that in reality an unbridgeable gulf separates us from even the chimpanzees so begging questions of consciousness and Mind Finally Conway

Morris tackles the question of extraterrestrials Undoubtedly the size and scale of the universe suggest that alien life must exist somewhere beyond Earth and our tiny siloed solar system After all evolutionary convergence more than hints that human like forms are universal But Dr Conway Morris has serious doubts The famous Fermi Paradox Where are they appears to hold Alone in the cosmos and unique but not quite in the way one might expect     **Hawk Eye Farm** John D. Hopkirk,2017-11-03 This book chronicles the history of a pioneering family of immigrant farmers the Hopkirks in southeastern Iowa It begins in 1838 and ends with the early life of the author their great grandson who was born in their house moved with his family to California and what he experienced as an immigrant growing up in that state It is a unique transect through history complete with many original letters 1807 and photographs 1850s which tell the story and bring it to life for the reader     **The Facts on File Dictionary of Biology** Daintith,2009 Incorporating the new terms and research compiled in the last few years in this field The Facts On File Dictionary of Biology Fourth Edition clearly defines the basic principles and terms used in this widely studied branch of science Approximately 300 new entries have been added to reflect new information and current entries and back matter have been revised as needed Pronuciation symbols have been added and many photographs have been replaced Pairing rich content with an accessible format this science dictionary is ideal for high school and college classrooms and libraries and will be useful to specialists and laypeople alike     *Tetrapod Water-Land Transition: Reconstructing Soft Tissue Anatomy and Function* Julia L.
