    Mining Text Data Charu C. Aggarwal,ChengXiang Zhai,2012-02-03 Text mining applications have experienced tremendous advances because of web 2 0 and social networking applications Recent advances in hardware and software technology have lead to a number of unique scenarios where text mining algorithms are learned Mining Text Data introduces an important niche in the text analytics field and is an edited volume contributed by leading international researchers and practitioners focused on social networks data mining This book contains a wide swath in topics across social networks data mining Each chapter contains a comprehensive survey including the key research content on the topic and the future directions of research in the field There is a special focus on Text Embedded with Heterogeneous and Multimedia Data which makes the mining process much more challenging A number of methods have been designed such as transfer learning and cross lingual mining for such cases Mining Text Data simplifies the content so that advanced level students practitioners and researchers in computer science can benefit from this book Academic and corporate libraries as well as ACM IEEE and Management Science focused on information security electronic commerce databases data mining machine learning and statistics are the primary buyers for this reference book   Text Mining with Machine Learning Jan Žižka,František Dařena,Arnošt Svoboda,2019-10-31 This book provides a perspective on the application of machine learning based methods in knowledge discovery from natural languages texts By analysing various data sets conclusions which are not normally evident emerge and can be used for various purposes and applications The book provides explanations of principles of time proven machine learning algorithms applied in text mining together with step by step demonstrations of how to reveal the semantic contents in real world datasets using the popular R language with its implemented machine learning algorithms The book is not only aimed at IT specialists but is meant for a wider audience that needs to process big sets of text documents and has basic knowledge of the subject e g e mail service providers online shoppers librarians etc The book starts with an introduction to text based natural language data processing and its goals and problems It focuses on machine learning presenting various algorithms with their use and possibilities and reviews the positives and negatives Beginning with the initial data pre processing a reader can follow the steps provided in the R language including the subsuming of various available plug ins into the resulting software tool A big advantage is that R also contains many libraries implementing machine learning algorithms so a reader can concentrate on the principal target without the need to implement the details of the algorithms her or himself To make sense of the results the book also provides explanations of the algorithms which supports the final evaluation and interpretation of the results The examples are demonstrated using realworld data from commonly accessible Internet sources   The Text Mining Handbook Ronen Feldman,James Sanger,2007 Text mining is a new and exciting area of computer science research that tries to solve the crisis of information overload by combining techniques from data mining machine learning natural language processing information retrieval and knowledge

Weiss,Nitin Indurkhya,Tong Zhang,Fred Damerau,2010-01-08 Data mining is a mature technology The prediction problem looking for predictive patterns in data has been widely studied Strong me ods are available to the practitioner These methods process structured numerical information where uniform measurements are taken over a sample of data Text is often described as unstructured information So it would seem text and numerical data are different requiring different methods Or are they In our view a prediction problem can be solved by the same methods whether the data are structured merical measurements or unstructured text Text and documents can be transformed into measured values such as the presence or absence of words and the same methods that have proven successful for pred tive data mining can be applied to text Yet there are key differences Evaluation techniques must be adapted to the chronological order of publication and to alternative measures of error Because the data are documents more specialized analytical methods may be preferred for text Moreover the methods must be modi ed to accommodate very high dimensions tens of thousands of words and documents Still the central themes are similar   *Text Mining Approaches for Biomedical Data* Aditi Sharan,Nidhi Malik,Hazra Imran,Indira Ghosh,2024-09-03 The book Text Mining Approaches for Biomedical Data delves into the fascinating realm of text mining in healthcare It provides an in depth understanding of how Artificial Intelligence AI and Machine Learning ML are revolutionizing healthcare research and patient care The book covers a wide range of topics such as mining textual data in biomedical and health databases analyzing literature and clinical trials and demonstrating various applications of text mining in healthcare This book is a guide for effectively representing textual data using vectors
