Textbook Of Peripheral Neuropathy By April 17 2012 Hardcover 1:

Textbook of Peripheral Neuropathy Peter D. Donofrio, 2012-04-17 Textbook of Peripheral Neuropathy is a practical but authoritative reference for clinicians in any medical specialty who are evaluating and treating patients with signs and symptoms of a peripheral neuropathy. Reviewing the full spectrum of clinically significant neuropathies, the book contains chapters on common and rare forms including mononeuropathy in the upper and lower extremities, mononeuritis multiplex, diffuse and symmetric polyneuropathies, brachial and lumbosacral plexopathies, and spinal root disorders—disorders that can mimic diffuse and/or focal neuropathies complicating diagnosis and evaluation. Coverage encompasses both inherited and acquired diseases, including neuropathies arising from physical injury, diabetes, alcoholism, toxins, autoimmune responses, nutritional deficiencies, vascular and metabolic disorders, medication-induced neuropathies, and idiopathic conditions. The textbook provides an evidence-based approach to testing, differential diagnosis, and treatment, and should serve as a trusted resource for healthcare professionals confronting the many manifestations of peripheral neuropathy in clinical practice. The chapters are written by internationally renowned expert contributors with deep clinical experience and contain numerous tables, figures, and algorithms providing clear diagnostic and management guidelines. Boxed Clinical Pearls and Key Points allow for quick access to pertinent information, making evaluation and review easy and rewarding.

Features of Textbook of Peripheral Neuropathy:

- Include Practical yet comprehensive and accessible go-to reference for clinicians
- Covers all clinically relevant peripheral neuropathies
- Clinical Pearls and Key Points are set off from the text for quick reference
- Contains clear diagnostic and management guidelines from expert contributors
- Structured chapters make it easy to find essential points of care information

Peripheral Neuropathy & Neuropathic Pain Professor Gérard Said, 2014-09-01

Written by one of the world's leading experts, Professor Gérard Said MD FRCP Dpt de Neurologie Hôpital de la Salpêtrière Paris, France. Peripheral neuropathy is a common medical condition, the diagnosis of which is often protracted or delayed. It is not always easy to relate a neuropathy to a specific cause. Many people do not receive a full diagnosis, their neuropathy often being described as idiopathic or cryptogenic. It is said that in Europe one of the most common causes is diabetes mellitus, but there are also many other known potential causes. The difficulty of diagnosis, the limited number of treatment options, a perceived lack of knowledge of the subject, except in specialised clinics, the number of which are limited, all add to the difficulties which many neuropathy patients have to face. Another additional problem for many patients is that once having received a full or even a partial diagnosis, they are then often discharged back to their primary healthcare team, who in many instances know little about this condition and how it may impact upon their patients' lives. In order to help bridge this gap in medical knowledge and to give healthcare providers a better understanding of this often distressing

condition The Neuropathy Trust has commissioned a new book on this complex topic Written by one of the world s leading experts on neuropathy Professor G rard Said it is a must read and also a handy reference book for doctors nurses physiotherapists chiropodists podiatrists and other health professionals As well as covering the anatomy of the nervous system and the basic pathological processes that may affect the peripheral nerves the book covers a whole range of neuropathic conditions These include for example Guillain Barr syndrome chronic inflammatory demyelinating polyneuropathy vasculitic neuropathies infectious neuropathies diabetic and other metabolic neuropathies hereditary neuropathies and neuropathies in patients with cancer Given the almost explosive increase in diabetes predicted over the coming years and the high incidence of HIV infections alone not to mention all the other possible causes of peripheral neuropathy no self respecting medical unit should be without a copy of this new book on their shelves The author Professor G rard Said is based in the Department of Neurology at the prestigious H pital de la Salp tri re in Paris He has devoted a lifetime to the study of peripheral neuropathy and alongside other great neurological names added much to the world s ever growing store of knowledge on this complex but fascinating condition which affects so many individuals
