The 17.6 Year Stock Market Cycle Kerry Balenthiran,2013-03-11 How do we know where we are in the current stock market cycle Are we in the midst of a new long term bull market or a market rally within an ongoing bear market The answers to the above questions are critical to forming an appropriate investment strategy to plan for the future The difference between anticipating the end of a secular or cyclical bull market and reacting to the significant crash that follows will have a big impact on anyone s investment returns and retirement plans This book is concerned with cycles A cycle is a sequence of events that repeat over time The outcome won t necessarily be the same each time but the underlying characteristics are the same A good example is the seasonal cycle Each year we have spring summer autumn and winter and after winter we have spring again But the weather can and does vary a great deal from one year to another And so it is with the stock market Kerry Balenthiran has studied stock market data going back 100 years and discovered a regular 17 6 year stock market cycle consisting of increments of 2 2 years He has also extrapolated the cycle forwards to provide investors with a market roadmap stretching out to 2053 He describes this in detail and outlines the changing character of the stock market through the different phases of the 17 6 year stock market cycle Whether you are an investment professional or private investor this book provides a fascinating insight into the cyclical nature of the stock market and enables you to ensure that you have the right strategy for the prevailing stock market conditions

Bond Stock Earnings Yield Differential model and similar methods to predict crashes Quantitative Finance This book presents studies of stock market crashes big and small that occur from bubbles bursting or other reasons By a bubble we mean that prices are rising just because they are rising and that prices exceed fundamental values A bubble can be a large rise in prices followed by a steep fall The focus is on determining if a bubble actually exists on models to predict stock market declines in bubble like markets and exit strategies from these bubble like markets We list historical great bubbles of various markets over hundreds of years We present four models that have been successful in predicting large stock market declines of ten percent plus that average about minus twenty five percent The bond stock earnings yield difference model was based on the 1987 US crash where the S P 500 futures fell 29% in one day The model is based on earnings yields relative to interest rates When interest rates become too high relative to earnings there almost always is a decline in four to twelve months The initial out of sample test was on the Japanese stock market from 1948 88 There all twelve danger signals produced correct decline signals But there were eight other ten percent plus declines that occurred for other reasons Then the model called the 1990 Japan huge 56% decline We show various later applications of the model to US stock declines such as in 2000 and 2007 and to the Chinese stock market We also compare the model with high price earnings decline predictions over a sixty year period in the US We show that over twenty year periods that have high returns they all start with low price earnings ratios and end with high ratios High price earnings models have predictive value and the BSEYD models predict even better Other large decline prediction models are call option prices exceeding put prices Warren Buffett s value of the stock market to the value of the economy adjusted using BSEYD ideas and the value of Sotheby s stock Investors expect more declines than actually occur We present research on the positive effects of FOMC meetings and small cap dominance with Democratic Presidents Marty Zweig was a wall street legend while he was alive We discuss his methods for stock market predictability using momentum and FED actions These helped him become the leading analyst and we show that his ideas still give useful predictions in 2016 2017 We study small declines in the five to fifteen percent range that are either not expected or are expected but when is not clear For these we present methods to deal with these situations The last four January February 2016 Brexit Trump and French elections are analyzed using simple volatility S P 500 graphs Another very important issue is can you exit bubble like markets at favorable prices We use a stopping rule model that gives very good exit results This is applied successfully to Apple computer stock in 2012 the Nasdaq 100 in 2000 the Japanese stock and golf course membership prices the US stock market in 1929 and 1987 and other markets We also show how to incorporate predictive models into stochastic investment models
