Organic Manifesto Maria Rodale, 2011-03-01 Drawing on findings from leading health researchers as well as conversations with both chemical and organic farmers from coast to coast Maria Rodale

s Organic Manifesto irrefutably outlines the unacceptably high cost of chemical farming on our health and our environment. She traces the genesis of chemical farming and the rise of the immense companies that profit from it, bringing to light the government's role in allowing such practices to flourish. She further explains that modern organic farming would not only help reverse climate change by reducing harmful carbon emissions and soil depletion but would also improve the quality of the food we eat, reduce diseases from asthma to cancer, and ensure a better quality of life in farming communities nationwide. For every parent wondering how best to safeguard the health and safety of her children, for every environmentalist in search of a solution to the worsening crisis that afflicts our land, air, and waters, for every shopper who questions whether it is worth it to pay more for organic, Maria Rodale offers straightforward answers and a single definitive course of action. We must demand organic now.

*Sustainability of Organic Farming in Nepal* Mrinila Singh, Keshav Lall Maharjan, 2017-11-07. This book explores the sustainability aspect of organic and conventional farming systems, which is commonly categorized into three sub-aspects: social, environmental, and economic. The social structure of a given area, organic-friendly technologies, soil properties, crop diversification, and income are the elements chosen for comparison and are analyzed using descriptive and statistical methods. In addition, the book assesses the current status of the local organic market in Nepal and field experiments involving the use of various organic means to achieve better production for selected vegetables. Determining the benefits and/or challenges of organic and conventional farming is important to determining the most viable type of farming in the long term, but can be greatly impacted by a given area's specific characteristics: social, environmental, political, etc., which is why this study focuses on a specific location, the Chitwan district of Nepal, where group conversion to organic farming has existed alongside conventional farming for years. This book offers a useful guide for both practitioners and academic researchers who are interested in organic farming and food security, particularly in developing countries.

*The Economics of Ecosystems and Biodiversity: Ecological and Economic Foundations* Pushpam Kumar, 2012-12-20. Human well-being relies critically on ecosystem services provided by nature. Examples include water and air quality regulation, nutrient cycling, and decomposition, plant pollination, and flood control, all of which are dependent on biodiversity. They are predominantly public goods with limited or no markets and do not command any price in the conventional economic system, so their loss is often not detected and continues unaddressed and unabated. This in turn not only impacts human well-being but also seriously undermines the sustainability of the economic system. It is against this background that TEEB, The Economics of Ecosystems and Biodiversity project, was set up in 2007 and led by the United Nations Environment Programme to provide a comprehensive global assessment of economic aspects of these issues. This book, written by a team of international experts, represents the scientific state of the art, providing a comprehensive assessment of the fundamental ecological and economic principles of measuring and valuing ecosystem services and biodiversity and showing how these can be mainstreamed into public policies. This volume and subsequent TEEB outputs will provide the authoritative knowledge and guidance to drive

forward the biodiversity conservation agenda for the next decade
