Grammaticalization as Economy Elly van Gelderen, 2004-01-01 This book provides much detail on the changes involving the grammaticalization of personal and relative pronouns topicalized nominals complementizers adverbs prepositions modals perception verbs and aspectual markers It accounts for these changes in terms of two structural economy principles Head Preference expresses that single words i.e. heads are used to build structures rather than full phrases and Late Merge states that waiting as late as possible to merge i.e. be added to the structure is preferred over movement The book also discusses grammar external processes e.g. prescriptivist rules that inhibit change and innovations that replenish the grammaticalized element Most of the changes involve the extended CP and IP as elements grammaticalize clause boundaries disappear Cross linguistic differences exist as to whether the CP IP and VP are all present and split and this is formulated as the Layer Principle Changes involving the CP are typically brought about by Head Preference whereas those involving the IP and VP by Late Merge

Grammaticalization Paths of English and High German Existential Constructions Simone E. Pfenninger, 2009 Existential constructions are a fundamental feature of many Indo European languages and constructions with non referential subjects have developed in all of the latter albeit at different stages in their histories High German does not feature a prototypical existential construction that is equivalent in syntactic and pragmatic function and semantic meaning to the English existential there construction How did a prototypical existential structure originate in English Why is it that High German has never developed such a construction Has it ever shown a tendency towards developing one How did two closely related languages such as English and High German come to differ so much with respect to these constructions By means of investigating a variety of historical and contemporary data this study shows that not only semantic pragmatic and syntactic

factors are involved which decide the choice of a certain construction but also very much the more general different linguistic development that the two languages underwent in the course of time *Syntax of the Sentence* Philip Baldi, Pierluigi Cuzzolin, 2009-06-05 This is the first of a multi volume set dealing with the long term evolution of Latin syntax roughly from the 4th century BCE up to the 6th century CE There are six pivotal chapters in this volume each dealing with a subject which is critical to the understanding of the syntactic system Topics covered include contact phenomena from Greek and Semitic the development of word order particles coordination and the syntax of questions and answers The volume is introduced by the editors in an explanatory Prolegomena and the textual parameters are set in a chapter on literary genres and sociolinguistics Crafted in a functional typological framework chapters are user sensitive with a minimum of technical jargon and formalism making them accessible to the widest range of readers
