Conceptual Information Retrieval Michael L. Mauldin, 2012-12-06 The information revolution is upon us Whereas the industrial revolution heralded the systematic augmentation of human physical limitations by harnessing external energy sources the information revolution strives to augment human memory and mental processing limitations by

harnessing external computational resources Computers can accumulate transmit and output much more information and in a more timely fashion than more conventional printed or spoken media Of greater interest however is the computer's ability to process classify and retrieve information selectively in response to the needs of each human user One cannot drink from the fire hydrant of information without being immediately flooded with irrelevant text Recent technological advances such as optical character readers only exacerbate the problem by increasing the volume of electronic text Just as steam and internal combustion engines brought powerful energy sources under control to yield useful work in the industrial revolution so must we build computational engines that control and apply the vast information sources that they may yield useful knowledge Information science is the study of systematic means to control classify process and retrieve vast amounts of information in electronic form In particular several methodologies have been developed to classify texts manually by armies of human indexers as illustrated quite clearly at the National Library of Medicine and many computational techniques have been developed to search textual data bases automatically such as full text keyword searches In general Biological Science Biological Sciences Curriculum Study, 1996 **Evolvability** Thomas F.
