Domain Engineering Iris Reinhartz-Berger, Arnon Sturm, Tony Clark, Sholom Cohen, Jorn Bettin, 2013-08-13 Domain engineering is a set of activities intended to develop maintain and manage the creation and evolution of an area of knowledge suitable for processing by a range of software systems It is of considerable practical significance as it provides methods and techniques that help reduce time to market development costs and project risks on one hand and helps improve system quality and performance on a consistent basis on the other In this book the editors present a collection of invited chapters from various fields related to domain engineering The individual chapters present state of the art research and are organized in three parts The first part focuses on results that deal with domain engineering in software product lines The second part describes how domain specific languages are used to support the construction and deployment of domains Finally the third part presents contributions dealing with domain engineering within the field of conceptual modeling All chapters utilize a similar terminology which will help readers to understand and relate to the chapters content The book will be especially rewarding for researchers and students of software engineering methodologies in general and of domain engineering and its related fields in particular as it contains the most comprehensive and up to date information on this topic

Words, Languages And Combinatorics Ii: Proceedings Of The International Conference Masami Ito, Helmut Jurgensen, 1994-09-19 The research results published in this set of proceedings range from pure semigroup theory to theoretical computer science in particular formal languages and automata Contributed by internationally recognized researchers the papers address issues in the algebraic and combinatorial theories of semigroups the structure theory of automata the classification theory of formal languages and codes and applications of these theories to various areas like circuit testing coding theory or cryptography The underlying theme is the semigroup and automaton theories and their role in certain applications

Structured Peer-to-Peer Systems Dmitry Korzun, Andrei Gurtov, 2012-11-12 The field of structured P2P systems has seen fast growth upon the introduction of Distributed Hash Tables DHTs in the early 2000s The first proposals including Chord Pastry Tapestry were gradually improved to cope with scalability locality and security issues By utilizing the processing and bandwidth resources of end users the P2P approach enables high performance of data distribution which is hard to achieve with traditional client server architectures The P2P computing community is also being actively utilized for software updates to the Internet P2PSIP VoIP video on demand and distributed backups The recent introduction of the identifier locator split proposal for future Internet architectures poses another important application for

DHTs namely mapping between host permanent identity and changing IP address The growing complexity and scale of modern P2P systems requires the introduction of hierarchy and intelligence in routing of requests Structured Peer to Peer Systems covers fundamental issues in organization optimization and tradeoffs of present large scale structured P2P systems as well as provides principles analytical models and simulation methods applicable in designing future systems Part I presents the state of the art of structured P2P systems popular DHT topologies and protocols and the design challenges for efficient P2P network topology organization routing scalability and security Part II shows that local strategies with limited knowledge per peer provide the highest scalability level subject to reasonable performance and security constraints Although the strategies are local their efficiency is due to elements of hierarchical organization which appear in many DHT designs that traditionally are considered as flat ones Part III describes methods to gradually enhance the local view limit when a peer is capable to operate with larger knowledge still partial about the entire system These methods were formed in the evolution of hierarchical organization from flat DHT networks to hierarchical DHT architectures look ahead routing and topology aware ranking Part IV highlights some known P2P based experimental systems and commercial applications in the modern Internet The discussion clarifies the importance of P2P technology for building present and future Internet systems

The Exploitation of Natural Resources of the Moon and Other Celestial Bodies Fabio Tronchetti,2009-10-23 The exploitation of natural resources of the moon and other celestial bodies represents one of the most fascinating developments in the fields of space law and space related activities The mining and use of extraterrestrial mineral resources may not only contribute to the betterment of conditions of people on earth but may also enable the realization of projects such as those envisaging a permanent human presence on the surface of the moon and other celestial bodies The exploitation of lunar and other celestial bodies resources however requires an appropriate legal framework for it to develop in an orderly and peaceful manner taking into consideration also such broader public concerns as regards security safety and the environment The current legal regime regulating activities in outer space lacks the required specific rules to govern the extraction and use of natural resources of the moon and other celestial bodies once being removed from their original location This book tries to fill this gap by proposing a legal regime aimed at regulating the mining and exploitation of extraterrestrial natural resources for commercial purposes *Proceedings of the American Institute of Electrical Engineers* ,1925 Vols for 1887 1946 include the preprint pages of the institute s Transactions *Domestic Counter-Terrorism in a Global World* Daniel Alati,2017-07-14 Although both Canada and the United Kingdom had experienced terrorism prior to the attacks of 9 11 and already had in place extensive provisions to deal with terrorism the events of that day led to the enactment of new and expansive counter

terrorism legislation being enacted in both jurisdictions This book explores these changes to counter terrorism laws and policies in the UK and Canada in order to demonstrate that despite the force of international legal instruments including the heavily scrutinized UN Security Council Resolution 1373 the evolution of counter terrorism policies in different jurisdictions is best analyzed and understood as a product of local institutional structures and cultures The book compares legal and political structures and cultures within Canada and the United Kingdom It analyses variations in the evolution post 9 11 counter terrorism measures in the two jurisdictions and explores the domestic reasons for them While focus is primarily geared towards security certificates and bail with recognizance investigative hearings in Canada and detention without trial control orders and TPIMs in the UK the use of secret evidence in the wider national security context terrorist listing civil litigation criminal prosecutions etc is also discussed The book reveals how domestic structures and cultures including the legal system the relative stability of government local human rights culture and geopolitical relationships all influence how counter terrorism measures evolve In this sense the book utilizes a methodology that is both comparative and interdisciplinary by engaging in legal political historical and cultural analyses This book will be particularly useful for target audiences in the fields of comparative law and criminal justice counter terrorism law human rights law and international relations and politics

Algorithm-Architecture Matching for Signal and Image Processing Guy Gogniat, Dragomir Milojevic, Adam Morawiec, Ahmet Erdogan, 2010-10-20 Advances in signal and image processing together with increasing computing power are bringing mobile technology closer to applications in a variety of domains like automotive health telecommunication multimedia entertainment and many others The development of these leading applications involving a large diversity of algorithms e g signal image video 3D communication cryptography is classically divided into three consecutive steps a theoretical study of the algorithms a study of the target architecture and finally the implementation Such a linear design flow is reaching its limits due to intense pressure on design cycle and strict performance constraints The approach called Algorithm Architecture Matching aims to leverage design flows with a simultaneous study of both algorithmic and architectural issues taking into account multiple design constraints as well as algorithm and architecture optimizations that couldn't be achieved otherwise if considered separately Introducing new design methodologies is mandatory when facing the new emerging applications as for example advanced mobile communication or graphics using sub micron manufacturing technologies or 3D Integrated Circuits This diversity forms a driving force for the future evolutions of embedded system designs methodologies The main expectations from system designers point of view are related to methods tools and architectures supporting application complexity and design cycle reduction Advanced optimizations are essential to meet design constraints and to enable a wide acceptance of these new technologies Algorithm Architecture Matching for Signal and Image Processing presents a collection of selected contributions from both industry and academia addressing different aspects of Algorithm Architecture Matching approach ranging from sensors to architectures design The scope of

this book reflects the diversity of potential algorithms including signal communication image video 3D Graphics implemented onto various architectures from FPGA to multiprocessor systems Several synthesis and resource management techniques leveraging design optimizations are also described and applied to numerous algorithms Algorithm Architecture Matching for Signal and Image Processing should be on each designer's and EDA tool developer's shelf as well as on those with an interest in digital system design optimizations dealing with advanced algorithms Energy Research Abstracts ,1984
