Theoretical Hydrodynamics L. M. Milne-Thomson, 2013-04-22 Classic exposition of the mathematical theory of fluid motion applicable to both hydrodynamics and aerodynamics Treatment based on vector methods and notation Over 600 exercises 391 diagrams 1968 edition **Theoretical Hydrodynamics by L.M. Fluid and Thermodynamics Kolumban Hutter, Yongqi Wang, 2016-06-10 This first volume discusses fluid mechanical concepts and their applications to ideal and viscous processes It describes the fundamental hydrostatics and hydrodynamics and includes an almanac of flow problems for ideal fluids The book presents numerous exact solutions of flows in simple configurations each of which is constructed and graphically supported It addresses ideal potential Newtonian and non Newtonian fluids Simple yet precise solutions to special flows are also constructed namely Blasius boundary layer flows matched asymptotics of the Navier Stokes equations global laws of steady and unsteady boundary layer flows and laminar and turbulent pipe flows Moreover the well established logarithmic velocity profile is criticised Theoretical Hydrodynamics L. M. Milne-Thomson, 1979 *The Mathematical Theory of Permanent Progressive Water-waves* Hisashi Okamoto, Mayumi Shoji, 2001 This book is a self contained introduction to the theory of periodic progressive permanent waves on the surface of incompressible inviscid fluid The problem of permanent water waves has attracted a large number of physicists and mathematicians since Stokes pioneering papers appeared in 1847 and 1880 Among many aspects of the problem the authors focus on periodic progressive waves which mean waves traveling at a constant speed with no change of shape As a consequence everything about standing waves are excluded and solitary waves are studied only partly However even for this restricted problem quite a number of papers and books in physics and mathematics have appeared and more will continue to appear showing the richness of the subject In fact there remain many open questions to be answered The present book consists of two parts numerical experiments and normal form analysis of the bifurcation equations Prerequisite for reading it is an elementary knowledge of the Euler equations for incompressible inviscid fluid and of bifurcation theory Readers are also expected to know functional analysis at an elementary level Numerical experiments are reported so that any reader can re examine the results with minimal labor the methods used in this book are well known and are described as clearly as possible Thus the reader with an elementary knowledge of numerical computation will have little difficulty in the re
