designed to reflect the external costs of excisable products such as global warming acid rain traffic congestion and the costs of cigarette and alcohol consumption This book by internationally recognized experts analyses the art of excise taxation providing a systematic insightful and often provocative treatment of a major fiscal instrument that policy makers often neglect and that gets little attention in the professional literature **The Marginal Cost of Public Funds** Bev

Dahlby, 2008-04-25 A unified treatment of the marginal cost of public funds covering both its theoretical foundations and how the MCF concept can be used to analyze tax policy issues The marginal cost of public funds MCF measures the loss incurred by society in raising additional revenues to finance government spending The MCF has emerged as one of the most important concepts in public economics it is a key component in evaluations of tax reforms public expenditure programs and other public policies The Marginal Cost of Public Funds provides a unified treatment of the MCF carefully developing its theoretical foundations in a variety of contexts and describing its application to a wide range of policies from excise taxes in Thailand to public sector borrowing in Canada and the United States The Marginal Cost of Public Funds develops the basic theory of the MCF within the framework of public economics and shows how it is related to the traditional measures of the efficiency loss from distortionary taxation The MCF concept is then applied to the major sources of revenues for governments sales and excise taxes taxes on labor income taxes on the return to capital public sector borrowing and intergovernmental grants This book will be an essential reference for economists and public policy analysts both in and out of government Exercises and recommendations for further reading at the end of each main chapter highlight its usefulness as a supplementary text in advanced undergraduate or graduate courses in public economics *Modernizing VATs in Africa* Sijbren

Cnossen, 2019-07-16 Most African countries are in dire need of more tax revenue In 28 out of 45 countries with a value added tax VAT total tax revenue as a percentage of GDP is around 15% or less falling short of what is necessary to finance basic human and economic development Far from being revenue raising instruments current African VATs are riddled with exemptions exclusions and zero rates on domestic goods and services that depress revenue are highly distortionary and greatly complicate the administration of VAT Modernizing VATs in Africa enables policymakers professionals and students to analyse African tax systems to ascertain how they can be modernized It explains the case for VAT base broadening over rate increasing arguing that exemptions and zero rates mainly accrue benefits for higher income groups Even more persuasively it demonstrates that the net result of fiscal systems can be equalizing if the revenue of broad based VATs is used to finance in

kind transfers such as healthcare and education VAT modernization should be used to enable governments to finance development Modernizing VATs in Africa puts a compelling case forward for how and why this can be achieved **Alcohol: No Ordinary Commodity** Thomas F.
