Aspects of Parking Orbit Selection in a Manned Mars Mission Prasun N. Desai, 1992 In this investigation which considers precession effects minimum initial LEO

masses were obtained for parking orbits characterized by having near equatorial inclinations high eccentricities and three dimensional departure burns Shows that there are a set of orbits characterized by low to moderate eccentricities $e = 0.2$ to 0.5 and nonequatorial inclinations $i = 70$ to 140 that reduce the initial LEO mass penalty Therefore careful selection of a parking orbit at Mars can enhance the potential for satisfying science requirements with minimal mass penalties *GeNeDis 2014* Panayiotis Vlamos, Athanasios Alexiou, 2014-11-22 The 1st World Congress on Geriatrics and Neurodegenerative Disease Research GeNeDis 2014 will focus on recent advances in geriatrics and neurodegeneration ranging from basic science to clinical and pharmaceutical developments and will provide an international forum for the latest scientific discoveries medical practices and care initiatives Advanced information technologies will be discussed concerning the various research implementation and policy as well as European and global issues in the funding of long term care and medico social policies regarding elderly people GeNeDis 2014 takes place in Corfu Greece 10-13 April 2014 This volume focuses on the sessions from the conference on computational biology and bioinformatics *The History of Cartography, Volume 6* Mark Monmonier, 2015-05-18 For more than thirty years the History of Cartography Project has charted the course for scholarship on cartography bringing together research from a variety of disciplines on the creation dissemination and use of maps Volume 6 Cartography in the Twentieth Century continues this tradition with a groundbreaking survey of the century just ended and a new full color encyclopedic format The twentieth century is a pivotal period in map history The transition from paper to digital formats led to previously unimaginable dynamic and interactive maps Geographic information systems radically altered cartographic institutions and reduced the skill required to create maps Satellite positioning and mobile communications revolutionized wayfinding Mapping evolved as an important tool for coping with complexity organizing knowledge and influencing public opinion in all parts of the globe and at all levels of society Volume 6 covers these changes comprehensively while thoroughly demonstrating the far reaching effects of maps on science technology and society and vice versa The lavishly produced volume includes more than five hundred articles accompanied by more than a thousand images Hundreds of expert contributors provide both original research often based on their own participation in the developments they describe and interpretations of larger trends in cartography Designed for use by both scholars and the general public this definitive volume is a reference work of first resort for all who study and love maps **National Union Catalog**, 1970 Includes entries for maps and atlases *Catalog of the United States Geological Survey Library* U.S. Geological Survey Library, 1972
