

## Plate Tectonics Study Guide

1. Explain the theory of plate tectonics. **Explain the 3 pieces of evidence that support the theory.**  
The theory of plate tectonics is that the Earth's lithosphere is divided into tectonic plates that drift/float on the asthenosphere. Plates move by convection currents.
  1. Continental Drift theory- plates fit together like puzzle pieces.
  2. Sea-floor spreading- sea floor spreads at mid-ocean ridges
  3. Magnetic Reversals- iron bands in the sea floor

2. Explain how convection currents move the plates apart. What 2 layers of the Earth are responsible for this?

Convection currents are when heat from the core heats the magma and the hot magma rises because it is less dense. Cooler magma sinks because it is more dense. The 2 layers are the lithosphere (tectonic plates) and the asthenosphere (thick, liquid magma)

3. Describe divergent plate boundaries: (oceanic-oceanic, oceanic-continental, continental-continental) Use a picture if possible to help explain.

**Oceanic-Oceanic:** 2 oceanic plates separate causing sea-floor spreading. A mid-ocean ridge is formed. This causes the ocean to get bigger.

**Continental-Continental:** 2 continental plates separate, this creates a rift (crack) that can fill with water and form a river. They do not separate completely, because continental crust is very thick.
