Applied Second Law Analysis of Heat Engine Cycles S. Can Gülen, 2023-06-20 *Applied Second Law Analysis of Heat Engine Cycles* offers a concise practical approach to one of the two building blocks of classical thermodynamics and demonstrates how it can be a powerful tool in the analysis of heat engine cycles Including real system models with the industry standard heat balance simulation software the Thermoflow Suite GTPRO MASTER PEACE THERMOFLEX and Excel VBA the book discusses both the performance and the cost It also features both calculated and actual examples for gas turbines steam turbines and simple and combined cycles from major original equipment manufacturers OEMs In addition novel cycles proposed by researchers and independent technology developers will also be critically examined This book will be a valuable reference for practicing engineers enabling the reader to approach the most

difficult thermal design and analysis problems in a logical manner      *Vacuum Bubbling* Yong Du Jun, 2024-05-23 Vacuum Bubbling introduces the background and applications for generating bubbles under a vacuum condition accomplished through depressurization without the need to heat water. It presents the advantage of utilizing vapor bubble in deaeration applications because the diffusion for degassing happens between the water body and micro vapor bubbles without the need of membrane or packing. Instead of relying on massive heating, vacuum bubbling focuses on depressurization down to the level of saturated vapor pressure or below to secure vapor bubbles with virtually zero dissolved non-condensable gases including oxygen. The book considers prospective applications such as extracting high oxygen content air from water for underwater breathing, pretreatment of aircraft fuel before being pumped into a fuel tank system, and probable desalination applications through massive bubbling combined with low grade renewable energy. The book is intended for researchers in thermal fluids, heat and mass transfer, process engineering, and water treatment fields, and industry professionals working in power generation plant and process engineering, transportation, and energy.
