Puri, 2002-07 Materials Thermodynamics Y. Austin Chang, W. Alan Oates, 2009-12-07 A timely applications driven text in thermodynamics Materials Thermodynamics provides both students and professionals with the in depth explanation they need to prepare for the real world application of thermodynamic tools Based upon an actual graduate course taught by the authors this class tested text covers the subject with a broader more industry oriented lens than can be found in any other resource available This modern approach Reflects changes rapidly occurring in society at large from the impact of computers on the teaching of thermodynamics in materials science and engineering university programs to the use of approximations of higher order than the usual Bragg Williams in solution phase modeling Makes students aware of the practical problems in using thermodynamics Emphasizes that the calculation of the position of phase and chemical equilibrium in complex systems even when properly defined is not easy Relegates concepts like equilibrium constants activity coefficients free energy functions and Gibbs Duhem integrations to a relatively minor role Includes problems and exercises as well as a solutions manual This authoritative text is designed for students and professionals in materials science and engineering particularly those in physical metallurgy metallic materials alloy design and processing corrosion oxidation coatings and high temperature alloys **Make and Test Projects in Engineering Design** Andrew E. Samuel, 2006-01-19 Make and test projects are used as introductory design experiences in almost every engineering educational institution world wide However the educational benefits and costs associated with these projects have been seldom examined Make and Test Projects in Engineering Design provides a serious examination of the design of make and test projects and their associated educational values A taxonomy is provided for the design of make and test projects as well as a catalogue of technical information about unconventional engineering materials and energy sources Case studies are included based on the author's experience of supervising make and test projects for over twenty five years The book is aimed at the engineering educator and all those planning and conducting make and test projects Up until now this topic has been dealt with informally Make and Test Projects in Engineering Design is the first book that formalises this important aspect of early learning in engineering design *Thermodynamics* Stephen R. Turns, Laura L. Pauley, 2020-02-27 Fully revised to match the more traditional sequence of course materials this full color second edition presents the basic principles and methods of thermodynamics using a clear and engaging style and a wealth of end of chapter problems It includes five new chapters on topics such as mixtures psychrometry chemical equilibrium and combustion and discussion of the Second Law of Thermodynamics has been expanded and divided into two chapters allowing instructors to introduce the topic using either the cycle analysis in Chapter 6 or the definition of entropy in Chapter 7 Online ancillaries including new LMS testbanks a
