The Reconstruction Of Space And Time Mobile Communication Practices:

The Reconstruction of Space and Time Rich Ling, Scott W. Campbell, 2010 One of the most significant and obvious examples of how mobile communication influences our understanding of time and space is how we coordinate with one another Mobile communication enables us to call specific individuals not general places Regardless of location we are able to make contact with almost anyone almost anywhere This advancement has changed and continues to change human interaction Now instead of agreeing on a particular time well beforehand we can iteratively work out the most convenient time and place to meet at the last possible moment on the way to the meeting or once we arrive at the destination In their early days mobile devices were primarily used for various types of emergency situations and for work In some cases the device was an essential element in various business operations or used so that overseas workers could communicate with their families The distance between a remote posting and the people back home was suddenly and dramatically reduced People began to share these devices not necessarily out of economic issues but also questions of family and interpersonal dynamics This cutting edge book deals with modern ways of thinking about communication and human interaction it will illuminate the ways in which mobile communication alters our experience with space and time Rich Ling is a sociologist at Telenor's research institute near Oslo Norway and has been Pohns Visiting Professor of Communication at the University of Michigan Ann Arbor He is the author of *New Tech New Ties How Mobile Communication is Reshaping Social Cohesion* and *The Mobile Connection The Cell Phone's Impact on Society* Scott W Campbell is assistant professor and Pohns Fellow of Telecommunications in the Department of Communication Studies at the University of Michigan His research has been published in the journals *Communication Education* *Communication Monographs* *International Journal of Communication* *Journal of Applied Communication Research* *New Media Society* and others

The Reconstruction of Space and Time Rich Ling, 2017 One of the most significant and obvious examples of how mobile communication influences our understanding of time and space is how we coordinate with one another Mobile communication enables us to call specific individuals not general places Regardless of location we are able to make contact with almost anyone almost anywhere This advancement has changed and continues to change human interaction Now instead of agreeing on a particular time well beforehand we can iteratively work out the most convenient time and place to meet at the last possible moment on the way to the meeting or once we arrive at the destination In their early days mobile devices were primarily used for various types of emergency situations and for work In some cases the device was an essential element in various business operations or used so that overseas workers could communicate with their families The distance between a remote posting and the people back home was suddenly and dramatically reduced People began to share these devices not necessarily out of economic issues but also questions of family and interpersonal dynamics The process of sharing decisions as to who is a legitimate partner makes the nature of relationships more explicit By examining the economy of sharing we not only see how sharing mobile phones

restructures social space but are also given insight into an individual's web of interactions. This cutting edge book deals with modern ways of thinking about communication and human interaction; it will illuminate the ways in which mobile communication alters our experience with space and time. Provided by publisher **The New Time and Space** John Potts, 2015-09-15. In the networked age we are living with changed parameters of time and space. Mobile networked communication fosters a form of virtual time and space which is superimposed onto territorial space. Time is increasingly composed of interruptions and distractions as smartphone users are overwhelmed by messages. *Sociality Revisited? The Use of the Internet and Mobile Phones in Urban Cameroon* Bettina Anja Frei, 2013. This book draws on the perspectives of non-migrants and urban youth in Bamenda in the Northwest region of Cameroon as well as on the views of Cameroonian migrants in Switzerland to explore the meaning and role of New Media in the negotiation of sociality in transnational migration. New Media facilitated connectedness serve as a privileged lens through which Cameroonians home and away scrutinise and mediate sociality. In this rich ethnography Bettina Frei describes how the internet and mobile phones are adopted by migrants and their non-migrant counterparts in order to maintain transnational relationships and how the specific medialities of these communication technologies in turn impact on transnational sociality. Contrary to popular presumptions that New Media are experienced as mainly connecting and enabling, this study reveals that in a transnational context in particular New Media serve to mediate tensions in transnational social ties. The expectations of being connected go hand in hand with an awareness of social and geographical distance and separation. *The Mobile Phone Revolution in Morocco* Hsain Ilahiane, 2022-02-14. In *The Mobile Phone Revolution in Morocco* Hsain Ilahiane examines how Moroccans use the mobile phone to redefine core notions of gender and space, honor and shame, placemaking and surveillance and control. Drawing on ethnographic fieldwork with urban street vendors, urban micro-entrepreneurs, urban female domestic workers and smallholder farmers in urban and rural Morocco, Ilahiane illustrates how the mobile phone has the endowed capacity to inform, rearrange and transform almost every aspect of Moroccan society. *Mobile Communication* Richard Seyler Ling, Scott W. Campbell, 2011. Overview. One of the most significant and obvious examples of how mobile communication influences our understanding of time and space is how we coordinate with one another. Mobile communication enables us to call specific individuals, not general places. Regardless of location, we are able to make contact with almost anyone, almost anywhere. This advancement has changed and continues to change human interaction. Now, instead of agreeing on a particular time well beforehand, we can iteratively work out the most convenient time and place to meet at the last possible moment, on the way to the meeting or once we arrive at the destination. This cutting edge book deals with modern ways of thinking about communication and human interaction; it will illuminate the ways in which mobile communication alters our experience with space and time. In the few short decades since their commercial deployment, 5 billion people, about three quarters of all humanity, including children, have become mobile phone users. Effects of this success are apparent everywhere.

ranging from accident scenes and earthquake rescue efforts to demeanor in the classroom and at dinner tables No one interested in the next generation of issues provoked by the mobile communication revolution will want to miss this important new collection of essays The contributors scope ranges across five continents and they address concerns at local national and international levels This book provides a revealing picture of how people communicate using camera phones and other mobile multimedia devices With such devices spreading faster than practically any other new technology questions about how these devices are being used and abused to capture and distribute embarrassing or raunchy images and content and what should be done about it are surfacing This volume presents the first detailed study of the use of these devices This groundbreaking work will be a fascinating read for both multimedia device professionals and everyday users alike

Communication Competence Annegret F. Hannawa, Brian H. Spitzberg, 2015-10-16 Almost everything that matters to humans is derived from and through communication Just because people communicate every day however does not mean that they are communicating competently In fact evidence indicates that there is a substantial need for better interpersonal skills among a significant proportion of the populace Furthermore dark side experiences in everyday life abound and features of modern society pose new challenges that make the concept of communication competence increasingly complex The Handbook of Communication Competence brings together scholars from across the globe to examine these various facets of communication competence including its history its essential components and its applications in interpersonal group institutional and societal contexts The book provides a state of the art review for scholars and graduate students as well as practitioners in counseling developmental health care educational intercultural and human resource management contexts illustrating that communication competence is vital to health relationships and all collective human endeavors

Netspaces Katharine S. Willis, 2017-05-15 The focus of this book is on understanding and explaining the way that our increasingly networked world impacts on the legibility of cities that is how we experience and inhabit urban space It reflects on the nature of the spatial effects of the networked and mediated world from mobile phones and satnavs to data centres and wifi nodes and discusses how these change the very nature of urban space It proposes that netspaces are the spaces that emerge at the interchange between the built world and the space of the network It aims to be a timely volume for both architectural urban design and media practitioners in understanding and working with the fundamental changes in built space due to the ubiquity of networks and media This book argues that there needs to be a much better understanding of how networks affect the way we inhabit urban space The volume defines five characteristics of netspaces and defines in detail the way that the spatial form of the city is affected by changing practices of networked world It draws on theoretical

approaches and contextualises the discussion with empirical case studies to illustrate the changes taking place in urban space This readable and engaging text will be a valuable resource for architects urban designers planners and sociologists for understanding how of networks and media are creating significant changes to urban space and the resulting implications for the design of cities

The Oxford Handbook of Mobile Music Studies, Volume 2 Sumanth Gopinath,Jason Stanyek,2014-03-21 The two volumes of The Oxford Handbook of Mobile Music Studies consolidate an area of scholarly inquiry that addresses how mechanical electrical and digital technologies and their corresponding economies of scale have rendered music and sound increasingly mobile portable fungible and ubiquitous At once a marketing term a common mode of everyday life performance and an instigator of experimental aesthetics mobile music opens up a space for studying the momentous transformations in the production distribution consumption and experience of music and sound that took place between the late nineteenth and the early twenty first centuries Taken together the two volumes cover a large swath of the world the US the UK Japan Brazil Germany Turkey Mexico France China Jamaica Iraq the Philippines India Sweden and a similarly broad array of the musical and nonmusical sounds suffusing the soundscapes of mobility Volume 2 investigates the ramifications of mobile music technologies on musical sonic performance and aesthetics Two core arguments are that mobility is not the same thing as actual movement and that artistic production cannot be absolutely sundered from the performances of quotidian life The volume s chapters investigate the mobilization of frequency range by sirens and miniature speakers sound vehicles such as boom cars ice cream trucks and trains the gestural choreographies of soundwalk pieces and mundane interactions with digital media dance music practices in laptop and iPod DJing the imagery of iPod commercials production practices in Turkish political music and black popular music the aesthetics of handheld video games and chiptune music and the mobile device as a new musical instrument and resource for musical ensembles
