The Reflection Of Life Functional Entailment And Imminence In Relational Biology:

The Reflection of Life A. H. Louie, 2013-04-17 A H Louie's *The Reflection of Life Functional Entailment and Imminence in Relational Biology* is a continuation of the exploratory journey in relational biology which began with his 2009 monograph *More Than Life Itself A Synthetic Continuation in Relational Biology*. The theme of his first book was 'What is life' the theme of this sequel is 'How do two life forms interact'. Biology is a subject concerned with organization of relations. Relational biology is the approach that advocates function dictates structure rather than structure implies function. It is mathematics decoded into biological realizations. The book demonstrates some of the powers of the approach of relational biology and illustrates how pertinent problems in biology can be better addressed this way. In the first volume the theory was developed by using partially ordered sets, lattices, simulations, models, Aristotle's four causes, graphs, categories, simple and complex systems, anticipatory systems and metabolism repair M/R systems. Here in the second volume these tools are expanded to employ set valued mappings, adjacency matrices, random graphs and interacting entailment networks. The theory of set valued mappings culminates in the imminence mapping which equips the further investigation of functional entailment in complex relational networks. Imminence in M/R networks that model living systems addresses the topics of biogenesis and natural selection. Interacting M/R networks with mutually entailing processes serve as models in the study of symbiosis and pathophysiology. The formalism also provides a natural framework for a relational theory of virology and oncology. This book will serve researchers and graduate students in mathematics and biology.

Anticipation Across Disciplines Mihai Nadin, 2015-09-23 Never before was anticipation more relevant to the life and activity of humankind than it is today It is no overstatement to suggest that humanity's future will be shaped by its capacity to anticipate Research Agenda for the 21st Century National Science Foundation The sciences and the humanities can no longer risk explaining away the complexity and interactivity that lie at the foundation of life and living The perspective of the world that anticipation opens justifies the descriptor the post Cartesian Revolution If anticipation is a valid research domain what practical relevance can we await Indeed anticipation is more than just the latest catch word in marketing the apps developed by the digital technology industry Due to spectacular advances in the study of the living anticipation can claim a legitimate place in current investigations and applications in the sciences and the humanities Biology genetics medicine as well as politics and cognitive behavioral and social sciences provide rich evidence of anticipatory processes at work Readers seeking a foundation for an ticipation will find in these pages recent outcomes pertinent to plant life political anticipation cognitive science architecture computation The authors contributing to this volume frame experimental data in language that can be shared among experts from all fields of endeavor The major characteristic is the inference from the richness of data to principles and practical consequences

The Economic Philosophy of the Internet of Things James Juniper, 2018-06-27 To properly understand the nature of the digital economy we need to investigate the phenomenon of a ubiquitous computing system UCS As defined by Robin Milner this notion implies the following characteristics i it will continually make decisions hitherto made by us ii it will be vast maybe 100 times today's systems iii it must continually adapt on line to new requirements and iv individual UCSs will interact with one another This book argues that neoclassical approaches to modelling economic behaviour based on optimal control by representative agents are ill suited to a world typified by concurrency decentralized control and interaction To this end it argues for the development of new process based approaches to analysis modelling and simulation The book provides the context both philosophical and mathematical for the construction and application of new rigorous and meaningful analytical tools In terms of social theory it adopts a Post Cognitivist approach the elements of which include the nature philosophy of Schelling Marx's critique of political economy Peircean Pragmatism Whitehead's process philosophy and Merleau Ponty's phenomenology of the flesh along with cognitive scientific notions of embodied cognition and neural Darwinism as well as more questionable notions of artificial intelligence that are encompassed by the rubric of perception and action without intelligence

The Philosophical Foundations of Ecological Civilization Arran Gare, 2016-08-05 The global ecological crisis is the greatest challenge humanity has ever had to confront and humanity is failing The triumph of the neo liberal agenda together with a debauched scientism has reduced nature and people to nothing but raw materials instruments and consumers to be efficiently managed in a global market dominated by corporate managers media moguls and technocrats The arts and the humanities have been devalued genuine science has been crippled and the quest for autonomy and democracy undermined The resultant trajectory towards global ecological destruction appears inexorable and neither governments nor environmental movements have significantly altered this or indeed seem able to The Philosophical Foundations of Ecological Civilization is a wide ranging and scholarly analysis of this failure This book reframes the dynamics of the debate beyond the discourses of economics politics and techno science Reviving natural philosophy to align science with the humanities it offers the categories required to reform our modes of existence and our institutions so that we augment rather than undermine the life of the ecosystems of which we are part From this philosophical foundation the author puts forth a manifesto for transforming our culture into one which could provide an effective global environmental movement and provide the foundations for a global ecological civilization

A Creative Philosophy of Anticipation Jamie Brassett, John O'Reilly, 2021-04-25 This edited collection highlights the valuable ontological and creative insights gathered from anticipation studies which orients itself to the future in order to recreate the present The gathered essays engage with many writers from speculative metaphysics to poetic philosophy ancient writing systems to the fringes of pataphysics The book situates itself as a creative intervention in and with various thinkers designers artists scientists and poets to offer insight into ways of anticipating It brings together philosophical practices for which creativity is both a fundamental area of consideration and a mode of working a characterization of recent Continental Philosophy which takes a departure from traditional futures studies thinking This book will be of interest to scholars and research in futures studies anticipation philosophy creative practice and theories about creative practice as well as the intersections between philosophy creativity and business

Objects and Pseudo-Objects Bruno Leclercq, Sebastien Richard, Denis Seron, 2015-04-24 The development of science logic mathematics and psychology in the 19th century made it necessary to introduce a growing number of new entities of which classical empiricism and strong extensionalism were unable to give a wholly satisfying account One of the major issues confronting the 20th century philosophers was to identify which of these entities should be rationally accepted as part of the furniture of the world and which should not and to provide a general account of how the latter are nevertheless subject to true predication The 13 original essays collected in this volume explore some of the main approaches to this issue in the 20th century including Brentano Meinong Husserl Carnap

Reaction to breakdowns is more expensive by many orders of magnitude than prevention This again became clear during the COVID 19 pandemic and is evinced in the sustainability crisis The dynamics of living matter transcends deterministic reaction Embodied in machines determinism empowered the human being providing the path to prosperity However in conjunction with reductionism it does away with complexity in which life is couched The living is by necessity anticipatory Awareness of the future means preserving life not in reaction to but in anticipation of change Living entities from the simplest bacteria to plants and insects to human beings are adaptive goal oriented and capable of self healing Anticipatory actions are expressed through non deterministic processes that unfold in concert with reactions They engage the wholeness of life including its interactions with the environment Awareness of consequences together with memory of the past informs actions that reflect the creative nature of human beings Redefining science and implicitly medicine is not a negation of its past but rather an affirmation of trust in explaining life s capacity to renew itself As opposed to increasingly expensive medicine as a practice of repair to prevent and to heal is to make life sustainable The moment of truth can no longer be postponed At stake is the future of humankind and even of life on planet Earth Reductionist determinism informs the obsession with progress at any cost Awareness of the fact that the human condition transcends that of the matter in which it is embodied explains and indeed justifies the call to Disrupt Science in its current state The age of the digital machine in particular of artificial intelligence is one of opportunities that pale when compared to its inherent risks The record of breakdowns including so called natural disasters by now global in scale is part of the empirical premise for the call for completing the Cartesian Revolution A Second Revolution in Science could unleash humanity s remaking free of surrendering to want Science has the opportunity not only to measure everything life included and accumulate data and process it for its own sake but also to realize its meaning The book cover is designed by Baruch Gorkin who is celebrated internationally for exquisite typefaces and for books reflecting meaning driven design Introduction to Anticipation Studies Roberto Poli, 2017-08-28 This book presents the theory of anticipation and establishes anticipation of the future as a legitimate topic of research It examines anticipatory behavior i e a behavior that uses the future in its actual decisional process The book shows that anticipation violates neither the ontological order of time nor causation It explores the question of how different kinds of systems anticipate and examines the risks and uses of such anticipatory practices The book first summarizes the research on anticipation conducted within a range of different disciplines and describes the connection between the anticipatory point of view and futures studies Following that its chapters on Wholes Time and Emergence make explicit the ontological framework within which anticipation finds its place It then goes on to discuss Systems Complexity and the Modeling Relation and provides the scientific background supporting anticipation It restricts formal technicalities to one chapter and presents those technicalities twice in formal and plain words to advance understanding The final chapter shows

that all the threads presented in the previous chapters naturally converge toward what has come to be called Discipline of Anticipation

Intangible Life A.H. Louie, 2017-12-05 This rare publication continues an exploratory journey in relational biology a study of biology in terms of the organization of networked connections in living systems It builds on the author's two earlier monographs which looked at the epistemology of life and the ontogeny of life Here the emphasis is on the intangibility of life that the real nature of living systems is conveyed not by their tangible material basis but by their intangible inherent processes Relational biology is the approach that hails function dictates structure it is mathematics decoded into biological realizations Therefore the work begins with a concise introduction to category theory equipping the reader with the mathematical metalanguage of relation biology The book is organized around three parts Part I is a comprehensive study of the most important functor in relational biology the power set functor The author lays the set theoretic foundations of the functorial connections in relational biology exploring relations mappings and set valued mappings In Part II Natural Law receives a new mathematical formulation founded on two axioms Everything is a set and Every process is a set valued mapping The reader sees how Metabolism Repair networks equipped with set valued processors expand their role from models of biological entities to generic models of all natural systems Part III expounds the various shades of invertibility in general and the inversion of encoding to decoding in particular A plethora of mathematical and biological examples illustrate the category theoretic concepts of equivalence and adjunction This book's algebraic approach to biological models will appeal to researchers and graduate students in mathematics biology and the philosophy of science

More Than Life Itself A. H. Louie, 2013-05-02 A H Louie's More Than Life Itself is an exploratory journey in relational biology a study of life in terms of the organization of entailment relations in living systems This book represents a synergy of the mathematical theories of categories lattices and modelling and the result is a synthetic biology that provides a characterization of life Biology extends physics Life is not a specialization of mechanism but an expansive generalization of it Organisms and machines share some common features but organisms are not machines Life is defined by a relational closure that places it beyond the reach of physicochemical and mechanistic dogma outside the reductionistic universe and into the realm of impredicativity Function dictates structure Complexity brings forth living beings

Theoretical Principles of Relational Biology Angelo Marinucci, 2023-09-27 This book proposes the foundation of the relational approach to biology rejecting the deterministic and reductionist approach of molecular biology Although biology has made enormous progress in the last seventy years onto genesis is still conceived as a revelation of information DNA Recovering the geometric tradition relational biology conceives scientific and epistemological tools cause probability space etc of science in a new way If probabilistic biology and organicism still proposes a biology based on physics with a fundamental invariant relational biology is based on variation its fundamental invariant is variation one of the most important elements of life This is an indispensable book for academics who consider biology from a new theoretical approach

in particular for those working in the domains of cancer ontogenesis and evolution
