Government and Energy Innovation Miles Brundage, 2014 **The Rightful Place of Science: Biofuels** John A. Alic, 2013-11-01 Biofuels examines prospects for large scale production of affordable sustainable transportation fuels Made from biomass or other alternatives to oil such fuels would not add greenhouse gases to Earth s atmosphere or compete with food crops Concise and authoritative avoiding the hyperbole that surrounds so many energy technology proposals Biofuels concentrates on essentials How technological innovation actually takes place not only through research but in response to market forces and business decisions The dynamics of the global oil industry which on the one hand supplies billions of people with relatively low cost energy and on the other imperils many of these same people through climate change Prospects for drop in alternatives to petroleum that can be burned in existing vehicles and equipment avoiding the need to turn over a fleet that in the United States alone numbers some 250 million cars and trucks U S government policies for fostering innovation in energy and more broadly and the strengths of the Defense Department relative to other agencies in supporting technological advance and scale up of alternative fuels **The Rightful Place of Science: Politics** Michael Crow, Robert Frodeman, David Guston, Carl Mitcham, Daniel Sarewitz, 2013-11-19 The inaugural volume of The Rightful Place of Science book series gathers a collection of thinkers who insist there is much to gain from trying to comprehend the politics of technological change and its close cousin the practice of science and scientific research The authors are part of an intellectual and ethical movement to view science and technology neither as objects of worship nor mere scholarly analysis They wish to improve on the politics of science and to judge their reforms by a pragmatic measure the quality of the outcomes of science and technology To these authors how we talk about technological change matters because policies ultimately express deeper vernacular yearnings for democracy equity and of course utility In these essays hard questions get asked new perspectives are presented and contrarian understandings abound Contemporary Climate Change Debates Mike Hulme, 2019-11-27 Contemporary Climate Change Debates is an innovative new textbook which tackles some of the difficult questions raised by climate change For the complex policy challenges surrounding climate migration adaptation and resilience structured debates become effective learning devices for students This book is organised around 15 important questions and is split into four parts What do we need to know What should we do On what grounds should we base our actions Who should be the agents of change Each debate is addressed by pairs of one or two leading or emerging academics who present opposing viewpoints Through this format the book is designed to introduce students of climate change to different arguments prompted by these questions and also provides a unique opportunity for them to engage in critical thinking and debate amongst themselves Each chapter concludes with suggestions for further reading and with discussion questions for use in student classes Drawing upon the sciences social sciences and humanities to debate these ethical cultural legal social economic technological and political roadblocks Contemporary Debates on Climate Change is essential
