Intelligent Design Denise Little, 2009-09-01 These ten original stories explore one of the most heatedly debated topics today. From a tale that examines whether life on Earth is an out of control science project to one which reveals which species will inherit the planet to a portrait of a scientist determined to discover the truth about God, the stories in this anthology tackle the big questions in ways that range from startling to satirical and are always entertaining. *The Last Winter*, *The Aging Gap Between Species* Anca Ioviță, 2016-12-18

Aging is a puzzle to solve. This process is traditionally studied in a couple of biological models like fruit flies, worms, and mice. What all these species have in common is their fast aging. This is excellent for lab budgets. It is a great short term strategy. Who has time to study species that live for decades? But lifespan differences among species are magnitudes of order larger than any lifespan variation achieved in the lab. This is the reason for which I studied countless information resources in an attempt to gather highly specialized research into one easy to follow book. I wanted to see the forest among the trees. I wanted to expose the aging gap between species in an easy to follow and logical sequence. This book is my attempt at doing just that. What are the mechanisms underlying the aging gap between species? I intentionally chose to write the answer to this question in plain English. Aging research is too important to hide it behind the closed doors of formal scientific jargon. This book could not have existed if green tea libraries and the Internet were not invented. The amount of data I had to browse in order to keep the essential patterns is huge. Yet this book is not exhaustive. This is not a dry academic textbook. I tried to instill life in a topic that is hugely important for the extension of human lifespan. Only you can decide if I achieved this.
