

# Ageing

## Main Physiological effects of ageing

→ Effects on skin (collagenase produced, collagen\* structure altered). There is a loss of elasticity due to x-links in elastin + collagen.

→ Faulty copying of DNA and a lifetime of exposure to mutagens leads to accumulated genetic changes/mutations. So faulty proteins may be made.

→ Degeneration of tissues – due to 'wear & tear'. Organ function, metabolic rate and lung capacities all decrease.

→ Immune system, efficiency decreases + incidence of autoimmune diseases increases.
