Bio-pigmentation and Biotechnological Implementations Om V. Singh, 2017-05-18 Recent technological advances have provided unique opportunities for the exploration of alternatives to the industrial use of chemically produced synthetic colors. The most promising developments in this area have been in bio pigmentation derived from microorganisms. This groundbreaking book reviews the current state of the science of bio pigmentation providing important insights into the molecular mechanisms of microbial biosynthesis of industrial pigments. Featuring contributions by leading researchers from both industry and academe, it explores the latest advances in the use of bio pigments as safe sustainable alternatives to chemically synthesized pigments and provides extensive coverage of the most promising sources of bio pigments within the food feed and pharmaceutical industries. Proposes microbial uniqueness of coloration in variety of food feed and pharmaceuticals. Covers the basic science behind bio pigmentation as well as the latest advances in the field. Describes detection strategies for screening and identifying color producing microorganisms under varying environmental conditions. Provides an exhaustive review of the literature on color producing extremophiles and offers fascinating insights into color production as a stress response in extremophiles. Explores microbial molecular mechanisms of color production with special coverage of color production as secondary metabolites under environmental stress. **Bio pigmentation and Biotechnological Implementations** is required reading for professionals and post doctoral students of microbiology, applied microbiology, food microbiology, food science and food biochemistry. It is a valuable working resource for scientists working in color dependent food feed and pharmaceuticals.

Bacteriophages Pilar García Suárez, Lucía Fernández, 2020-11-24 There is talk of an upcoming antibiotic armageddon with untreatable post operative infections and similarly untreatable complications after chemotherapy. Indeed the now famous O'Neill Report <https://amr-review.org> suggests that by 2050 more people might die from antibiotic resistant bacterial infections than from cancer. While we are still learning all the subtle drivers of antibiotic resistance, it seems increasingly clear that we need to take a one health approach curtailing the use of antibiotics in both human and veterinary medicine. However, there are no new classes of antibiotics on our horizon. Maybe something that has been around forever can come to our rescue: bacteriophages. Nevertheless, it is also necessary to do things differently and use these new antimicrobials appropriately. Therefore, an in depth study of bacteriophage biology and case by case applications might be required. Whilst by no means comprehensive, this book does cover some of the many topics related to bacteriophages as antimicrobials, including their use in human therapy and aquaculture. It also explores the potential use of phage endolysins as substitutes of antibiotics in two sectors where there is an urgent need: human therapy and the agro food industry. Last but not least, there is an excellent perspective article on phage therapy implementation.
